SUMMARY

Full stack engineer with more than ten years of experience building websites and web applications. I started with WordPress, moved to React and Next.js, and now use AI tools like Claude Code and Cursor every day. I led the move of a recruiting platform with about 1,000 users to Next.js, built an employee retention tool that HR adopted, and delivered client websites for companies including Elbit Systems and Wizer.

SKILLS

Front end: React, Next.js (App Router and Pages Router), TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Material-UI

WordPress: Custom themes and plugins, Gutenberg blocks, WooCommerce, Elementor, Divi, PHP, headless WordPress (REST API)

Back end: Node.js, REST APIs, GraphQL, MySQL, Firebase

AI tools: Claude Code, Cursor, MCP servers, subagents

Practices: Code review, mentoring, WCAG accessibility, performance and Core Web Vitals, SEO, Git, Figma

EXPERIENCE

Founder · DAN Web Solutions, Columbia, MD — 2026 – Present

- Web development business for small and growing companies: WordPress sites, React and Next.js apps, and AI features, with an AI-assisted workflow and a manual review of every change.

Full Stack Software Engineer · Log-On — 2021 – 2026

- HR and tech recruiting company of about 1,000 people. Worked directly with the managing director, the VP of R&D, and the VP of Strategy and Marketing.
- Led the migration of the applicant tracking system (about 1,000 users) from React to the Next.js Pages Router, then the App Router, adding server-side rendering, a smaller bundle, and faster page loads.
- Proposed and built an employee retention platform (Next.js, TypeScript, Tailwind CSS, Firebase) that shows retention rates and which employees may be at risk of leaving. HR adopted it for regular use. Designed so the score could not be used on its own to decide terminations.
- Brought Cursor with MCP into the team’s production workflow, with every AI-generated change reviewed before release.
- Mentored a junior developer and ran code reviews.

Frontend Developer (Contract) · AppsFlyer — 2020

- Built a company-wide React and Material-UI design system with GraphQL data integration and automated code review checks.

Full Stack Engineer (Contract) · Log-On — 2018 – 2020

- Built the first version of the applicant tracking system in React and Material-UI on the WordPress REST API (headless WordPress).

Frontend Web Developer · Matomy Media Group — 2016 – 2018

- Built WordPress sites, landing pages, and custom plugins for marketing campaigns, and improved SEO and page speed.

Freelance Web Developer · Israel — 2016 – 2020

- Developer and main client contact for websites built mostly through Anova Web Development, for clients including Elbit Systems, Wizer, Natural Formula, Art Judaica, Sano, Careline, Teka Israel, and Amazing Day.
